

Supplier info: Energy usage

We as a company have chosen to embed more sustainable practices while organising events, by using TRACE.

TRACE is the definitive carbon measurement platform for sustainable events. By capturing data we can generate emissions and waste impact reports in real time, designed to give us insight into the environmental impact of our events. More information about TRACE can be found [here](#).

As one of our suppliers, we appreciate your assistance in helping us gather together the information needed to fully measure our carbon impact and to help us create a greener, more sustainable industry. We are eager to measure the impact of our energy usage from this event, and therefore need information from you to calculate our footprint.

Data required:

The amount of energy generated by the event, from mains electricity or temporary power eg. generators. For mains electricity you will need to confirm if you use a standard or renewable tariff.

You'll then need to provide the energy usage for mains electricity in one of the below methods:

- **Best:** Meter readings for electricity and gas used in your venue during the hire period. If only a part of a venue is being used, where possible provide data for the specific are being hired.
- **Better than basic:** Annual energy consumption of the venue, size of venue and size of space hired
- **Basic:** The platform can estimate usage based on the type and size of the venue and size of space hired.

Temporary Power: Litres of fuel used in any generators, or Kgs of bottled gas used.

Inputting into TRACE:

The data that you gather can then either be [inputted directly into TRACE](#) or into [templates](#) that have been built to be [copied and pasted](#) into the platform, by either yourselves or by your client.

Once you've inputted data into TRACE, you're eligible for a TRACE-trained supplier badge to advertise your commitment to measurement, contact us via [this form](#) to get yours.
